

A 10x10 grid of handwritten digits. The digits are either '5' or '9'. The grid shows a smooth transition from '5's on the left to '9's on the right. The first column contains all '5's, and the last column contains all '9's. The intermediate columns show a gradual shift in the shape of the digits, with some '5's appearing more like '9's and vice versa, illustrating a concept in machine learning or data science.
